Melanoma, also redundantly known as malignant melanoma, is a type of skin cancer that develops from the pigment-producing cells known as melanocytes. Melanomas typically occur in the skin, but may rarely occur in the mouth, intestines, or eye (uveal melanoma). In women, they most commonly occur on the legs, while in men, they most commonly occur on the back.

Melanoma - Wikipedia

Introduction. The first report of granuloma annulare (GA) is credited to Colcott-Fox, who in 1895 described a 'ringed eruption of the fingers' in an 11-year-old girl []. The term 'granuloma annulare' itself was introduced later in 1902 by Radcliffe-Crocker []. GA is a condition that remains poorly understood and past attempts to review GA have conceded that the etiopathogenesis eludes ...
