This spring Lowes was still selling dual-brite fixtures for about \$39.00 and these take standard 100 watt incandescent or equivalent fluorescent bulbs. The fixture has a light sensor that turns the whole thing off in the daytime and on at night. When on, it is normally receiving about half voltage; when it senses motion, it delivers full voltage.

## **How do "dual-brite" lights work? | Yahoo Answers**

Dual Brite (if applicable) - allows light to come on half bright for selected time after dusk (Off, 3 hour, 6 hour, or Dusk-to-Dawn). If enabled, the light will turn full bright when motion is detected and will return to dim after selected on-time

has passed.

## **HeathZenith**

Dual Brite basically just means that your light will turn on at dusk at a lower light level (and then turn off at dawn) if motion is detected the light level will increase. One of the timer settings determines how long the light stays on if you don't want to use the dusk till dawn setting the other timer determines how long the level 2 light stays on after motion has been detected.
