As its name implies, a freezer's door seal (also known as a gasket) seals the air in your freezer, keeping cold air in and warm air out. Inspect the seal for cracks by slowly moving your hand around the outside perimeter of the closed freezer door. If you feel cold air leaking out, the seal likely needs to be replaced.

Freezer Troubleshooting | GE Appliances Factory Service

Since last weekend my refrigerator (GE Monogram side by side) temp has raised a few degrees, it has always been dead on 37 degrees and now it is in between 40 and 42 and won't go down. It is still set at 37 but it won't get there. I tried setting it to a lower temp to see if it would make a difference but it doesn't.
